

Cableless no longer means QC-less.

February 17, 2010

## **The International Seismic Co. (iSeis) Announces Sale of Sigma™ Cableless Seismic Acquisition System to MicroSeismic, Inc.**

**Denver, February 17, 2010** – iSeis announced today that Houston, Texas based MicroSeismic, Inc. has purchased the Sigma™ cableless seismic acquisition system as developed and manufactured by iSeis.

MicroSeismic's purchase of the Sigma™ cableless seismic acquisition system follows an extensive and comprehensive field evaluation of cablefree technologies and platforms currently available. Sigma™ successfully, consistently and reliably demonstrated the capabilities, flexibility, adaptability and scalability needed and required by MicroSeismic for passive monitoring.

"We are impressed with the capabilities and efficiencies that Sigma™ offers and extremely pleased with the quality, reliability and performance that it delivers," said Dave Oxford, Vice President Field Operations at MicroSeismic. "This technology will enable MicroSeismic, Inc. to deliver even greater value and flexibility to our customers who are utilizing our FracStar® surface arrays and our Buried Arrays in the unconventional resource plays."

Robert Mulverhill, President of iSeis added, "For Sigma™, it's all about the *abilities* of our system - flexibility, scalability, adaptability and portability. All the requirements needed in a proven cableless system. It's the right fit for MicroSeismic."

"Sigma™ was specifically designed to address the needs and requirements of the industry going forward. We listened and understand the performance requirements and the environmental challenges and responsibilities a system must have for ease of deployment, be it rugged topography or in urban sensitive areas. This adaptability makes Sigma™ the system of choice." Mulverhill noted.

Oxford stated that MicroSeismic, Inc. plans to have the initial deployment operational by the beginning of Q2 this year. The initial program structure is built around 2,400 channels of Sigma™.

### **About MicroSeismic, Inc.**

MicroSeismic, Inc. is the leading provider of passive seismic and microseismic data acquisition, analysis and interpretation to the global oil & gas industry. MicroSeismic's technology and services enable E&P operators to better manage their reservoirs, increase their production rates and decrease their completion costs and risks. For more information visit [www.microseismic.com](http://www.microseismic.com) or call 713-781-2323.
